

MC Pro / S5-MC 2.5.1 Release Notes

P/N: 840-09948-12

Version: 2.5.1

January 2010

EuCon 2.5.1 adds support for Apple OS 10.6 (Snow Leopard) and Windows 7 (32-bit). Mac OS 10.4 (Tiger) is no longer supported. Logic 9 support is restored. Additionally, this release contains various stability fixes and minor bug fixes.

Compatibility

The MC and System-MC can control any application. EuCon aware applications have the highest level of integration. These applications include:

- Nuendo 4 through 4.3
- Pyramix 6.1.8
- Logic Pro 8.0.2 and 9.0.2
- Final Cut Studio 7
- Soundtrack Pro 3
- Digital Performer 6.0.2 and 7
- Sonar 7.0.2 and 8.0
- Apogee Maestro 1.7 (Duet and Ensemble)
- Metric Halo MIO 5.1
- Pro Tools LE & HD 6.9 and above (HUI via EuCon)
- RME HDSP Mixer (Mackie Control Universal via EuCon)
- Sony Vegas 7.0 & 8.0 (Mackie Control Universal via EuCon)

Installation instructions

Before installation of new EuCon software, back up your MC User Sets (see Section 2.2.4 of the Operation Manual). User Sets are not overwritten or deleted when uninstalling or installing, but as a precaution, it is recommended that you back up your User Sets before updating your EuCon software.

This release contains a new default User Set with new Application Sets for the most commonly-used audio applications and more. If you want these installed (which is recommended), delete your existing User Set directory after making a backup copy of it. Do this before installing the new version of EuCon.

Installing:

A new set of installer files are included in this release. Please read carefully.

EuConWS_2_5_1.exe (Windows XP/7 only)

- EuCon Core (MC Client / EuDiscovery)
- Studio Monitor Express (optional)
- Studio Monitor Pro 2 (optional)
- Nuendo adapters
- Nuendo VST XML files

- Pyramix adapter

EuConWorkstation_2_5_1.dmg (Mac only)

- EuCon Core (MC Client / EuDiscovery)
- EuCon application adapters

StudioMonitorExpress.dmg (Mac only)

- EuCon Core (MC Client / EuDiscovery)
- EuCon application adapters
- Studio Monitor Express

Note: for Mac installation, users should only use one of the above mentioned installers.

EuConMC_2_5_1.exe

- MCapp software
- CM408T module update server

Note: it is important to uninstall MCapp and restart before installing the new software!

New Features & Bug Fixes

General:

- Support for Mac OS X Snow Leopard 10.6.
- Support for Windows 7.
- Mac OS X Tiger 10.4 is no longer supported.
- Support for Apple Logic 9.0.1 and later.
- Support for Pyramix 6.1.8 Build 791
- Steinberg adapter correctly installs on all Macintoshes.
- Deleting a track in the middle of a project no longer causes track one to be selected.
- Pyramix EQ graph updates correctly.
- Better stability when direct assigning tracks and using layouts. Crashes and inoperable knob sets are fixed.
- Improved stability when using certain foreign languages.

Known Issues

General:

- Logic 9 has changed several commands in the EuCon library. Usersets created using the Logic 8 library may have buttons that will not load correctly.
- **Workaround:** reprogram the button using the new command directory.
